EDUCATION

University of Waterloo *Computer Science – AI, Engineering (BCS, 2027)*

EXPERIENCE

World Labs – Intern, Research Engineer

May-Aug 2026

- Built an end-to-end pipeline to automate sourcing, cleaning, and download of data for model training
- Designed and optimized a new captioning system for training data, increasing model controllability and prompt adherence

Theory Ventures – Engineering Intern, Applied AI

Jan-May 2026

- Built a data catalogue and internal intelligence engine for informed venture investing, fed by call transcript data

Amazon Robotics – Software Development Engineer Intern

May-Aug 2025

- Designed, built, and launched a directive signal configuration system, now active in **all 1300+ fulfillment centres**.
- Built an ops configuration dashboard to standardize **4 packaging workflows** with RBAC, audit logging, and 1-click rollback.
- Phased pilot showed **+1.3% throughput** and **-5.6% error** for segment associates; modelled **~\$10.8M/yr productivity lift**.
- Set up serverless backend; **Led reviews** with 5 stakeholder groups; **Top summer contributor** on 30-person team, by LoC.

OpenAI – Engineering Analyst, Model Evaluation (contract)

May-Jul 2025

- Increased software systems engineering abilities of OAI's **Deep Research** to target the Senior level through an RLHF system.
- Built an error taxonomy for **reasoning, retrieval, and citation** failure modes; instrumented categorical eval runs.
- Implemented **citation controls**, reducing hallucinated references and increasing grounded answers on long-context tasks.

Mercor – AI Interpretability & Evaluation Lead

Feb-May 2025

- Became the **1st** company to successfully achieve **fully-automated candidate performance prediction** in hiring.
- Coordinated team of **15 analysts** to identify, taxonomize, and score model error in RLHF form—bringing accuracy **from 70% to 90%, where human interviewers achieve ~65%**.

Diligent – Co-Founder, Engineering

Jan-Feb 2025

- Led **10-student** engineering team, secured **50+ LOIs** from VC and PE funds, guided **acquisition** of company sub-project

Electric Mind – Associate Consultant Intern, Product

Sep-Dec 2024

- Directed strategic product management for a **\$2M infrastructure program** for Private Wealth clients.
- Conducted end-to-end analysis, capability modeling, and acceptance testing to inform key decisions.
- Developed communication channels between stakeholders & a **12-person** team to align business & technical goals.

Interac – Software Developer Intern

Jan-Dec 2023

- Rapid prototyping and pitching to ideate, validate, and incubate **4 early-stage strategic investments**.
- Built financial emulator API tokenizing authentication to secure modular consent over **30+ cross-institution interactions**.
- Spearheaded transition to new ML fraud detection system, generating **\$1.5M/month** in model lift.
- Enhanced test environment infrastructure to support **2 new service launches**.

PROJECTS & AWARDS

Wat Street – Quantitative Research Lead, Reinforcement Learning, AI Agents

2023–2024

- Researched deep RL for dynamic asset allocation in automated portfolio management, quant trading.

Citadel Summer Invitational Datathon – **Top 5%**

2024

Waterloo.AI – **1st** place in Generative AI Challenge

2023

ScotiaEmpower – **3rd** place in Scotiabank's S:\HA<KS

2023

Commodity Trading Algorithm – **Top 3%** of **8170** teams in **IMC** Prosperity Challenge

2023

City of Pickering Civic Award (Top 1 of 2000)

2022

Royal Canadian Air Force, Pilot's License Scholarship (Top 50 of 25000)

2022

Languages: Java, Python, C/C++, React, Typescript, MATLAB, R

Spoken: English, French, Spanish

Technologies: Git, Linux, AWS (DynamoDB, Cloudwatch, Lambda), Docker, MySQL, Postgres, Sklearn, TensorFlow, PyTorch

Hobbies: Backpacking, Camping, Hiking, Soccer, Bartending, Childcare, AI for Social Good + Philanthropy
